This Post Is Older Than 6 Or More Months , Please Use These Tips Carefully .

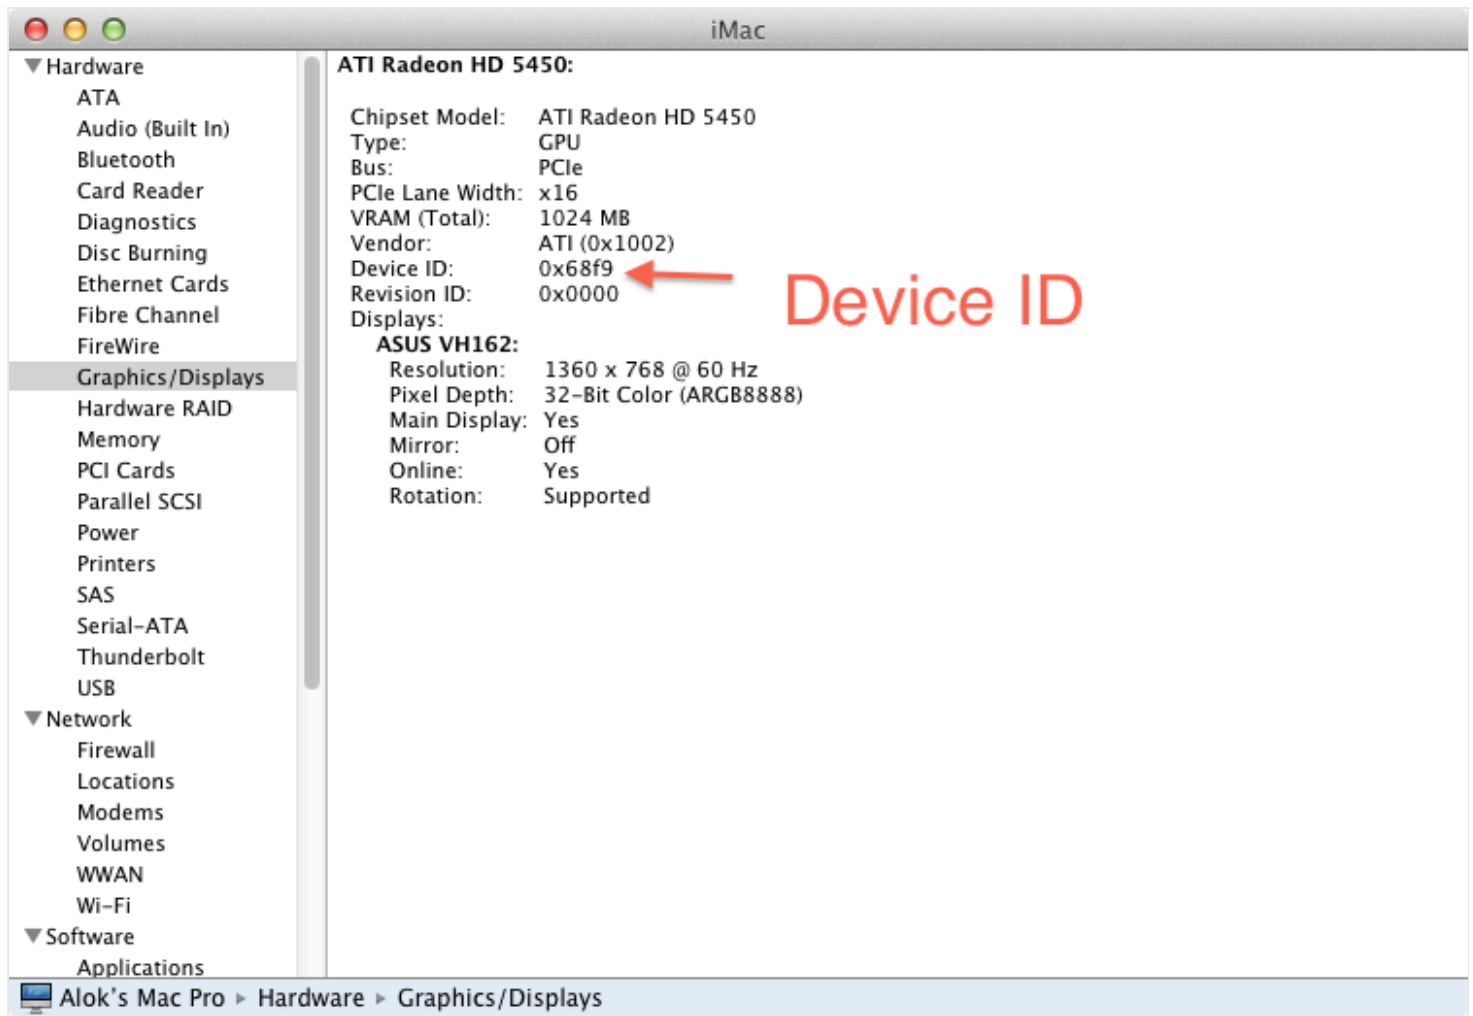

This is updated kexts for OS X10.9 Mavericks , install it like another text and boot using GraphicsEnabler=Yes .

NOTE : I do not issue any guarantee that this will work for you!
use [google](#) for other troubleshooting

1 . Figure out your graphics device ID

- about this mac
- more info
- system report
- click on graphics/displays from left sidebar

2: delete all ATI and AMD related Kexts and injectors EXCEPT these
